

SecurityScorecard Ratings

Take Control of your Cyber Risk with Data you can Trust

Organizations across the globe rely on security ratings to understand how a company's cybersecurity posture correlates with the likelihood of sustaining a data breach. SecurityScorecard helps security teams measure and report on the effectiveness of their risk mitigation strategy as it relates to their own security posture and their business ecosystem (third- and fourth-party vendors, business partners, and associates). SecurityScorecard's easy-to-understand A-F scores increase confidence, awareness, and visibility when proving the value of a security program.

Companies with a higher SecurityScorecard Rating are less likely to sustain a breach

Trusted data at your fingertips to enable you to...

Increase Confidence

Gain a sense of control and confidence when measuring, quantifying, and reporting on your security team's performance.

Effectively Report Risk to your Board

Benchmark and communicate on the current security posture of your own organization and your vendors.

Translate Risk into Dollars

Quantify the financial impact of cyber risk and justify the need for budget to leadership.

Increase Awareness

Gain a mutual understanding of why security matters and demonstrate the importance of your security program.

Integrate your Tech Stack

Largest cybersecurity ratings Marketplace to automate security and vendor risk workflows.

Invite your Vendors

Collaborate with your partners by inviting them into the platform to assess and remediate vulnerabilities within their attack surface.

Increase Visibility

Gain a 360-degree view of your own network and your complete business ecosystem's, and save time by evaluating third and fourth parties based on the amount of risk they present.

Detect Unknown Vendors

Instantly get a view of your digital supply chain ecosystem to help take active steps to mitigate risk.

Monitor Vendors at Scale

Continuously track, monitor, and tag high-level scorecard scores of organizations that are not part of a portfolio.

Search the Global Attack Surface

Combine attack surface, attribution, and deep threat intelligence into a single platform to gain better insight and faster analysis on threat attacks.

Exchange and Validate Questionnaires

Accelerate the cybersecurity questionnaire exchange process by empowering organizations to send, complete, and automatically validate questionnaires at scale.

Proven Return on Security Investments

198%

Three-year risk adjusted return on investment.

83%

Reduction in vendor questionnaire preparation time and effort.

Information Leak

*“As I began to execute a **comprehensive cybersecurity plan**, it became clear that SecurityScorecard would be a vital component of our strategy. SecurityScorecard is the first tool I brought in because of its ability to provide a **holistic view of our current security posture**. In doing so we were able to see the areas we needed to focus on, and **you can't manage what you can't measure.**”*
